

C Programming

Raylib

CORSO DI PROGRAMMAZIONE
3° ANNO

Docente **Federico De Felici**

Summary

- ⬡ Raylib Intro
- ⬡ Project Assignment

Raylib

Intro

What is Raylib?

- ⬡ “raylib is a simple and easy-to-use library to enjoy videogames programming.” (cit. <https://www.raylib.com>)
- ⬡ Cross-Platform library
 - ⬡ Windows, Linux, MacOS, RPI, Android, HTML5
 - ⬡ No iOS (because of OpenGL)
- ⬡ Main Features:
 - ⬡ Window (hardware accelerated)
 - ⬡ Input (mouse, keyboard, joydap, touch)
 - ⬡ Audio (wav, ogg, mp3, flac, xm, mod)
 - ⬡ Image/Texture
 - ⬡ 2D/3D Support
- ⬡ Written in C99 (with PascalCase/camelCase notation)
 - ⬡ Natively usable from C and C++
 - ⬡ Bindings for other 60+ languages (C#, Python, ...)

2D Coordinate System

Project Example

```
C main.c X
src > C main.c > ...
1  #include "raylib.h"
2
3  int main(void)
4  {
5      const int screenWidth = 800;
6      const int screenHeight = 600;
7
8      InitWindow(screenWidth, screenHeight, "raylib [core] example - basic window");
9
10     SetTargetFPS(60);           // Set our game to run at 60 frames-per-second
11
12     // Game loop
13     while (!WindowShouldClose()) // Detect window close button or ESC key
14     {
15         BeginDrawing();
16
17         ClearBackground(RAYWHITE);
18         DrawText("Congrats! You created your first window!", 190, 200, 20, LIGHTGRAY);
19
20         EndDrawing();
21     }
22
23     CloseWindow();
24     return 0;
25 }
26
```

Exploring Features

- ⬡ Game Loop
- ⬡ Rendering
- ⬡ Input (mouse, keyboard)
- ⬡ Images and Textures
- ⬡ Writing Text
- ⬡ Playing Audio
- ⬡ Camera 2D
- ⬡ UI ???

Just a subset of Raylib features useful for the project

Project Assignment

1945

— C Raylib

Systems

UI

Rendering

Input

Collision

Audio

AI

Player

Perks

Memory

UI

- ⬡ Window target: 640x480
 - ⬡ to stick with provided assets,
 - ⬡ but eventually you can try otherwise
- ⬡ Life count
- ⬡ Energy
- ⬡ Score
- ⬡ Window Icon (bonus)
- ⬡ Splash Screen with Menu (bonus)
- ⬡ Game over Screen (bonus)

Rendering

○ Sprite Management

- Enemy, Player, Bullets
- Simulate movements, explosions

○ Level

- Vertical Scrolling
- randomized islands

BONUS: Use atlas instead of single images

Input

- ⬡ Keyboard
- ⬡ Player movement
- ⬡ Player shoot
- ⬡ Menu selection (bonus)

Collision

- ⬡ Enemy \Leftrightarrow Player
- ⬡ Enemy Bullet \Rightarrow Player
- ⬡ Player Bullet \Rightarrow Enemy
- ⬡ Enemy Bullet \Leftrightarrow Player Bullet

Simple collision detection among rects!

Audio

- ⬡ Music
- ⬡ Effects (FX)
 - ⬡ Player / Enemy Explosion
 - ⬡ Shooting

AI

- ⬡ Enemy Spawning
- ⬡ Enemy / Bullet Pooling
- ⬡ Enemy Movements (straight, diagonal, ...)
- ⬡ Boss Fight (Bonus)

Player

- ⬡ Keyboard for movement and shooting
- ⬡ Animation
- ⬡ When loose a life:
 - ⬡ player control is disabled for 3 seconds
 - ⬡ player sprite “blink”

Perks (Bonus)

- ⬡ Pooling / Spawning
- ⬡ Life + 1
- ⬡ Special Bullets (that could affect shoot animation)

Memory

⬡ Memory Management

**Remember:
at each allocation must
correspond a deallocation!!!**

Dev Specs

- ⬡ Source Configuration: Github
 - ⬡ Project managed with git protocol
 - ⬡ Readme with a brief game description, user guide and developer guidelines
 - ⬡ Make a release with the binaries ready to play
- ⬡ Video for showing the final result
- ⬡ Project Automation: CMake
- ⬡ Unit Testing: use aiv-cunit or clove-unit
- ⬡ Collections: use aiv-collections
